APPG AI

The APPG AI was set up in January 2017 to address ethical issues and new industry norms for applying Artificial Intelligence, including machine learning, decision making, natural language understanding, automated reasoning and autonomous systems.

We try to understand how AI will impact the lives of UK citizens and organisations, and subsequently, how should it be regulated? How will health, energy, insurance, consulting, financial, legal and knowledge-intensive business services be traded? How should the new business models be regulated, and what about the data? There is a lot to explore and evidence is key for regulation and policy.

Evidence Meetings in Parliament – Hot Topics Debates – Dinners – Expert advisors

To register interest in joining the APPG AI thought leadership and advisory board, giving evidence in Parliament or simply attending – please email appg@biginnovationcentre.com
